Genet. 7:415-422(1998).

FUNCTION: May be a growth regulator and have a role in special systems involved in processing somatosensory infor as well as in face and body structure formation.

SUBCELLULAR LOCATION: Nuclear.

ALTERNATIVE PRODUCTS: 2 isoforms; 1/SHOX2A/SHOTA (shown by 2/SHOX2B/SHOTB/OG12XB; are produced by alternative splicitissue SPECIFICITY: Expressed in heart, skeletal muscle, lung, bone marrow fibroblast, pancreas and placenta.

DEVELOPMENTAL STAGE: Expressed during cranofacial develop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ಥ

electrostatic switch mechanism for activation by calcium.";
Proc. Natl. Acad. Sci. U.S.A. 97:588-592(2000).
-! FUNCTION: Calcium-regulated non-lysosomal thiol-protease
catalyze limited proteolysis of substrates involved in
cytoskeletal remodelling and signal tranduction.
-! SUBUNIT: Heterodimer of a large (catalytic) and a small
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Burkhart-Schultz

C -!- FUNCTION: SEQUENCE-SPECIFIC TRANSCRIPTION FACTOR WHICH IS PART OF

A DEVELOPMENTAL REGULATORY SYSTEM THAT PROVIDES CELLS WITH

SPECIFIC POSITIONAL IDENTITIES ON THE ANTERIOR-POSTERIOR AXIS.

C -!- SUBCELLULAR LOCATION: Nuclear.

C -!- DEVELOPMENTAL STAGE: EXPRESSED IN WHOLE EMBRYOS AND FETUSES AT

C -!- SUBCELLULAR STAGE: EXPRESSED IN WHOLE EMBRYOS AND FETUSES AT

C -!- SIMILARITY: BELONGS TO THE ANTP FAMILY OF HOMEOBOX PROTEINS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (CSD)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Obokata J., Ohme M., Hayashida N.;
"Nucleotide sequence of a cDNA clone encoding a putat protein of 19.7 kDa in Nicotiana sylvestris.";
Plant Mol. Biol. 17:953-955(1991).
-!- SIMILARITY: BELONGS TO THE COLD-SHOCK DOMAIN (CSI-: SIMILARITY: CONTAINS 2 C2HC-TYPE ZINC FINGERS.
-!- SIMILARITY: CONTAINS 2 CCHC-TYPE ZINC FINGERS.
-!- CAUTION: Was originally (Ref.1) thought to be a structural protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ಥ

"Cloning, comparative mapping, and RNA expression of the mouse homologues of the Saccharomyces cerevisiae nucleotide excision gene RAD23.";
Genomics 31:20-27(1996).
-!- FUNCTION: INVOLVED IN DNA EXCISION REPAIR. MAY PLAY A PART DAMAGE RECOGNITION AND/OR IN ALTERING CHROMATIN STRUCTURE ALLOW ACCESS BY DAMAGE-PROCESSING ENZYMES.
-!- SUBUNIT: HETERODIMER OF A 125 kDa SUBUNIT (P125) AND OF A 58 kDa SUBUNIT (P58).
-!- SUBCELLULAR LOCATION: Nuclear (Probable).
-!- SIMILARITY: CONTAINS 1 UBIQUITIN-LIKE DOMAIN.
-!- SIMILARITY: CONTAINS 2 UBA DOMAINS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     D'Esposito M., Morelli F., Acampora D., Migliaccio E., Simeone A., Boncinelli E.;
Boncinelli E.;
"EVX2, a human homeobox gene homologous to the even-skipped segmentation gene, is localized at the 5' end of HOX4 locus on chromosome 2.";
Genomics 10:43-50(1991).
-!- SUBCELLULAR LOCATION: Nuclear.
-!- DEVELOPMENTAL STAGE: EXPRESSED DURING EARLY EMBRYOGENESIS AND NEUROGENESIS IN A BIPHASIC MANNER.
-!- DEVELOPMENTY: BELONGS TO THE EVEN-SKIPPED FAMILY OF HOMEOBOX PROTEINS.

Then repeat sequences are GGN clusters and encode a glycine-rich domain in a Drosophila cDNA homologous to the rat helix destabilizing protein.";

Proc. Natl. Acad. Sci. U.S.A. 84:1819-1823(1987).

-!- FUNCTION: MAY PARTICIPATE IN A FUNCTION COMMON TO THE EXPRESSION OF MOST GENES TRANSCRIBED BY RNA POLYMERASE II.

-!- SUBCELLULAR LOCATION: Nuclear.

-!- ALTERNATIVE PRODUCTS: AT LEAST 2 ISOFORMS; 1 AND 2 (SHOWN HERE);

C -!- ALTERNATIVE PRODUCTS: AT LEAST 2 ISOFORMS; 1 AND 2 (SHOWN HERE);

C -!- TISSUE SPECIFICITY: UBIQUITOUS. ENRICHED IN THE BRAIN AND CENTRAL NERVOUS SYSTEM DURING EMBRYOGENESIS. ENRICHED IN THE ADULT HEAD.

C -HEADS AND TORSOS) ONLY THE TYPE 2 ISOFORM IS DEFENDED.

                        This is the amino acid sequence of the sunA protein encoded by the prosublancin 168 nucleotide sequence used in the method of the invention. The peptide designated sublancin 168, is an antimicrobial useful for treating infections and preserving food against spoilage bacteria, particularly Gram-positive bacteria. Pro-sublancin 168 and pre-sublancin 168, are the precursors of sublancin 168. Sublancin 168 is very stable at low pH and can be autoclaved without damage. It does not decompose after 2 years in aqueous solution of about

The peptide designated sublancin 168, is an antimicrobial useful for treating infections and preserving food against spoilage bacteria, particularly Gram-positive bacteria. Pro-sublancin 168 and pre-sublancin 168, are the precursors of sublancin 168. Sublancin 168 is very stable at low pH and can be autoclaved without damage. It does not decompose after 2 years in aqueous solution of about neutral pH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antimicrobial peptide, sublancin 168, from Bacillus subtilis used for, e.g. treatment of infections caused by Gram negative bacteria and as food preservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0;

The method may be used for identifying herbicidal compounds, which can be used to suppress the growth of undesirable vegetation in fields where important crops are grown. The cDNA sequences encoding these proteins important crops are grown. The convergence of the plants of the convergence of the conv

```
The present sequence is that of Arabidopsis thaliana cystathionine beta lyase (CBL, EC-4.4.1.8), an enzyme that catalyses the conversion of cystathionine to homocysteine. The enzyme is essential for normal plant growth and development. The invention provides ENR-A, CBL, UROD, PBGD and CPPO genes (see AAA89291-95), methods for the recombinant production of the encoded enzymes (see AAB20016-20) in heterologous hosts, methods for enzymes centing themse herbicides to suppress growth of undesired vegetation. Plants, plant tissue, seeds and cells tolerant to herbicides that inhibit ENR-A, CBL, UROD, PBGD or CPPO are obtained by altering the corresponding enzyme activity either by increasing expression of wild-type herbicide-sensitive enzymes or by expressing modified herbicide tolerant enzymes. The herbicide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                                                                                                         New Arabidopsis thaliana DNA molecules for identifying compounds that are inhibitors of Arabidopsis enzymes encoded by the DNA, which can be used as herbicides -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes gamma-carboxylated conopeptides derived from cone snail venom. The gamma-conopeptides and their propeptides are useful as agonists of neuronal pacemaker calcium channels. The conopeptides are naturally available in minute amounts in the venom of cone snails and their derivatives are synthetic. The peptides modulate slow inward cation channels in vertebrates involved in syndromes of clinical relevance, such as epileptic activity in hippocampus and pacemaker potentials in heart muscle. The present sequence represents a conopeptide propeptide.
                        Conopeptide; gamma-conopeptide; venom; cone snail; cation channel; epilepsy; pacemaker; heart muscle; neuronal pacemaker calcium channel.

US-08-325-071-65

Sequence 65, Application US/08325071

Patent No. 5587311

GENERAL INFORMATION:
APPLICANT: COBON, Stewart Gary
APPLICANT: MOORE, Joanna Terry
APPLICANT: WILLADSEN, Peter
APPLICANT: WILLADSEN, Peter
APPLICANT: WILLADSEN, Peter
APPLICANT: KEMP, David Harold
APPLICANT: RAND, Reith No. 5587311man
TITLE OF INVENTION: DNA Encoding A Cell Membrane
TITLE OF INVENTION: Glycoprotein Of A Tick Gut
NUMBER OF SEQUENCES: 71

CORRESPONDENCE ADDRESS:
TYPE: Floppy disk
SR: IBM PC compatible
ING SYSTEM: PC-DOS/MS-DOS
RE: PatentIn Release #1.0, Version #1.25

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

hypothetical protein R11A8.7b - Caenorhabditis elegans
C; Species: Caenorhabditis elegans
C; Species: Caenorhabditis elegans
C; Species: Caenorhabditis elegans
C; Species: Caenorhabditis elegans
C; Accession: T24158; T24179
C; Accession: T24158; T24179
R; Bardill, S.
Submitted to the EMBL Data Library, April 1996
A; Reference number: 219846
A; Reference number: 219846
A; Reference number: 219846
A; Recension: T24158
A; Scatus: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Residues: 1-2584 <WIL>
A; Cross-references: EMBL: 270686; PIDN: CAB54289.1; GSPDB: GN00022; CESP:R11A8.7b
A; Cross-reference: clone R10H10
R; Cummings, P.
Submitted to the EMBL Data Library, March 1996
A; Reference number: 219849
A; Accession: T24179
A; Accession: T24179
A; Accession: T24179
A; Residues: 1-2584 <WIZ>
A; Reperimental source: clone R11A8

Virology 179:759-767(1990).

-! FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE V
CELL RECEPTORS AND FOR INITIATING INFECTION.

-! SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWC
(HA1 AND HA2) LINKED BY A DISULFIDE BOND.

-! SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         563

-!- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VELL RECEPTORS AND FOR INITIATING INFECTION.

-!- SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWC (HAI AND HA2) LINKED BY A DISULFIDE BOND.

-!- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.

Toistinct lineages of influenza virus H4 hemagglutinin genes in different regions of the world.";
Virology 169:408-417(1989).

-!- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS CELL RECEPTORS AND FOR INITIATING INFECTION.

-!- SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO CHAI (HAI AND HA2) LINKED BY A DISULFIDE BOND.

-!- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.

Influenza A virus.";

Virology 179:759-767(1990).

-!- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS

CELL RECEPTORS AND FOR INITIATING INFECTION.

-!- SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO CHAI

(HAI AND HA2) LINKED BY A DISULFIDE BOND.

-!- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                                                               Ø
